Optional

**Surcharge applied for painted screens.*

Projection Laminate Formica
Optional

Finish your Bay or Bow projection with Laminate Formica, simplifying installation without painting or sealing.

Euro-White

NEW

The Glass Unit

The glass unit about 90% of the whole window and is one of the most important elements. Your decision will dramatically affect your living comfort and expenses for many years.

Examples of Condensation

Excess condensation will cause water, ice, and mold to collect on your windows. The right spacer can significantly reduce the risk of condensation and its aftermath.

High Performance Reflective Glass Coatings

HeatSeal® heat reflective coatings are microscopically thin layers of metal & metal oxide that act like a filter – some energy is transmitted, some energy is reflected.

High Performance HeatSeal® Spacer

A spacer separates the panes in an insulated glass unit, sealing the gas within its space. The main disadvantage to metal spacers used by most in the industry is energy loss and condensation.

OKNA's HeatSeal® Spacer and sealant system is made with six individual non-metallic components, produced in a controlled factory setting. It is IGU-ready out of the box, applied in a one-step process by OKNA's state-of-the-art robotic assembly line that seals the unit with heat and compression. HeatSeal® helps your home achieve the warmest glass and least condensation possible.

Super Spacer® is a registered trademark of Edgetech I.G., Inc./ • Intercept® is a registered trademark of PPG Industries, Inc. DuraSeal is a registered trademark of TruSeal Technologies, Inc. Swiggle is a registered trademark of TruSeal Technologies, Inc. Simulation performed by Enermodal engineering, Ltd. using Window 5.2. All air spaces are 0.562" wide 0.033 emittance low-E glass.

Heating & Cooling

In climates where heating and cooling are the primary concern, HeatSeal®Glass products are designed to take advantage of free solar heat, resulting in higher inside glass temperature. Passive solar and thermal insulation reduce the draft sensation caused by cold glass surfaces, providing windows that reduce heating costs.

HEATSEAL® GLASS

HEATSEAL® TRIPLE GLASS

Cooling

In climates where cooling is your main concern, SunSeal® Glass products are designed to reduce solar heat while still providing color neutrality. This solar control property, combined with thermal insulating benefits, results in beautiful, natural-looking glass that helps keep air conditioning costs low.

SUNSEAL® GLASS

Features

- **Fully Welded, Rigid uPVC Vinyl Frame** for greater strength and stability.
- **Aluminum and Steel Reinforcements** in the front mullion.
- **The Multipoint Locking System** provides a tighter seal and added security.
- **Twin Sealing/Fully Screened/Operating Casements** with external glazing for improved weather protection.
- **Glass Shelf with Steel Support System** is available for units over 42".
- **Two-Part Structural Silicone** is used to glaze the top slope and vertical dead-lite portions of the unit.
- **Window Shipped Completely Assembled** for easy installation.
- **Vinyl Frame Will Not Chip, Rot, or Peel** and will never need to be painted.
- **Snap-In Sill Cover for Seat Board** provides aesthetic appeal and weather resistance.
- **Exterior-Grade Plywood** head board, seat board and jamb are 1 1/4" for improved structural and thermal performance; support brackets are not needed.
- **Locks and Operators** are mounted to the inside front area for easy access. Operators are sealed to prevent air and water infiltration.
- **AAMA Certified DP-50 (R50) Rating** for units ≤ 63" x 63".*

Head/Seat Board & Jamb Options

Frame Options

Acrylic Solid Surface Seat Board Options

*Although units of a larger size do not have the same R-50 "Coastal Rating", they still provide all of the features and options of the smaller sizes. ** Garden Windows do not feature High Performance Reflective Glass Coatings or HeatSeal® spacer.
